Thank you for choosing a William Optics MEGREZ 80 high-quality short tube refractor.

This simple step-by-step instruction manual is designed to provide Megrez owners with a better understanding of how to operate their new telescope by providing precise, updated information.

These instructions will also guide you through how to properly maintain the Megrez, and how to operate it at its maximum capabilities.

Please carefully familiarize yourself with your telescope’s parts and functions before operating it for the first time.

**WARNING!**

**DO NOT USE THIS TELESCOPE UNDER ANY CIRCUMSTANCES TO DIRECTLY VIEW THE SUN.**

It could easily cause instant blindness or serious damage to your eyes. To view the sun, use only appropriately designed solar filters that will reject 99.96% of the sun light and heat. Educate your family on how to use this telescope properly during day and night time observations. For further information please contact your local dealer.

Connection Instructions
(2" Diagonal Mirror)

**Step-1**
Using the supplied L-Bracket, attach the telescope to the tripod threaded with a standard photographic 1/4-20 connection knob. Ensure that the knob is tight or locked down before proceeding.

**Step-2**
Loosen lock screw for release.

**Step-3**
Tighten lock screw.

**Step-4**
Insert eyepiece for visual observation.

After the telescope is firmly connected to the tripod, extend the dew shield.

Remove 2" to 1.25" adapter.

Tighten lock screw.

Insert eyepiece for visual observation.

Connection Instructions
(2" Erecting Prism)

**Step-1**
Using the supplied L-Bracket, attach the telescope to the tripod threaded with a standard photographic 1/4-20 connection knob. Ensure that the knob is tight or locked down before proceeding.

**Step-2**
Loosen lock screw for release.

**Step-3**
Tighten lock screw.

**Step-4**
Insert eyepiece for visual observation.

After the telescope is firmly connected to the tripod, extend the dew shield.

Remove 2" to 1.25" adapter.

Tighten lock screw.
**Connection Instructions**

(Aligning Finderscope)

**Step-1**
Find a distant object in the telescope with a low power eyepiece.

**Step-2**
Align the finderscope by pointing at the same object, then loosen or tighten the alignment screws.

**Step-3**
Use a high power eyepiece and repeat this procedure.

**Connection Instructions**

(Finderscope)

**Step-1**
Extract the black plastic screw and place the finderscope bracket on Megrez 80 focuser and attach with lock screw.

**Step-2**
Insert finderscope into finder bracket.

**Step-3**
Insert illuminator into finderscope.

**Step-4**
Tighten the knob on finderscope.

**Note:**
The image will be reversed left to right if a standard star Diagonal is used.

View Field of Telescope.
(with WO Erecting Prism)
Note: The image will be reversed left to right if a standard star Diagonal is used.

View Field of Finderscope.
(with WO Erecting Illuminated Finderscope)
Usage

The Megrez 80 is designed to work with both 1 1/4” and 2” diameter eyepieces in various focal lengths, for both daytime and nighttime viewing. Because the Megrez 80 is well suited to viewing nebulae, clusters, large galaxies and comets, we recommend the use of high quality wide angle eyepieces. The WO SWAN and UWAN series eyepieces are available in a variety of focal lengths. Viewing the moon and planets is also impressive at magnifications of 130X when seeing conditions permit.

To calculate the magnification of your telescope and eyepiece combination, divide the telescope focal length in mm by the eyepiece focal length in mm. For example, a 4mm eyepiece in a 480mm Megrez Fluorite will display an image of 120X. (480mm / 4mm = 120) The suggested maximum magnification depends on the model of scope as well, with the Megrez Fluorite able to handle the most power and remain color free. Some C.A. (Chromatic Aberration) may be introduced by the eyepiece or other accessories, so high quality eyepieces and accessories are highly recommended to maximize the viewing ability of the telescope.

Keep in mind that the atmosphere plays an important role in seeing conditions, and only the best seeing conditions will support high power viewing. Additional power under less than ideal seeing conditions will not result in an increase in viewable details, and lower powered eyepieces should there be used under those conditions.

A stable tripod or mount is recommended for optimal viewing. This includes high quality photography tripods, and German Equatorial mounts, which are designed for astronomical use and include precise tracking of celestial objects. Optional accessories from WO include mounting rings and plates, super high quality 2” Quartz star diagonals, and 2” Erecting Prisms, all of which provide for superior viewing and high quality images.

The Megrez telescope line has been specifically designed for astrophotography, with the Fluorite models best suited to the high quality imaging. Please see our website for examples of photos taken with these telescopes. The Megrez Accessories Chart on page 13 provides additional details on photographic accessories for various CCD, digital and film cameras.

Never aim your telescope or finderscope at the Sun without proper Solar filters installed on the front of the telescope. Doing so for even a moment may permanently damage your vision. Proper Solar filters consist of a filters made by reputable manufacturers, designed to fit tightly over the front of the dew shield. Solar eyepiece filters are not considered safe, and should not be used. With proper front mounted Solar filters, the telescope will not be harmed by viewing the Sun. Contact your Authorized WO Dealer for further information on the brands, sizes, and prices of proper solar filters.

Storage and Cleaning

- We recommend storing all equipment in an air tight container with desiccate packages to remove unwanted humidity from the air. Never leave the telescope in a humid environment, and avoid leaving the scope in a hot heated environment. If not properly stored, it is possible for the scope to develop mildew growth or other preventable conditions. Be careful after a night of observing when conditions might leave dew on the lens, and allow the scope to air dry in a room temperature environment before storing the telescope.

- If the front lens surface becomes dusty, smeared, shows fingerprints, or any other surface build up, the following steps can be taken to clean the lens. First, gently blow away any surface dust or particles with a clean air blower (canned or compressed air is not recommended). Second, use a photographic quality optical cleaning solution and cloths to gently wipe the surface clean. A clean cloth should be used every time that cleaning is needed. With proper care, and protection, cleaning should rarely be needed.

- The Megrez is coated in a durable and beautiful multi-layer Dupont white paint finish is tough and resistant to most natural elements but care should be taken to keep it clean. A slightly dampened clean soft cloth with plain water should be enough to clean the surface. Please avoid any harsh chemical cleaners or organic solvents like benzene, alcohol, etc, as these may ruin the paint.
Caution for Safety

Caution! Never directly view the Sun with your telescope.
Do not aim your telescope at the Sun without a front mounted high quality professionally manufactured solar filter. Viewing the Sun without the proper protection may result in permanent severe damage to your eyes, and even cause blindness. Contact your Authorized WO Dealer if you are interested in purchasing a compatible and proper solar filter.

Always place the telescope on a flat surface, to prevent it from falling and injuring yourself or others.

Never use the telescope in the rain or in conditions where it may get wet. The telescope is not designed to be waterproof. If the telescope accidentally gets caught in the rain, immediately wipe off all water using a clean dry soft cloth. If the telescope gets totally soaked in water, immediately contact your Authorized WO Dealer for service instructions.

Do not disassemble or attempt to repair your telescope without a written authorization from William Optics Corp., as this violates the warranty terms under the limited product warranty, and negates any guarantee.

Bundled Equipment

1. Stylish soft backpack style carrying case with custom fitted foam interior, designed to be water resistant and carry-on size.
2. L-bracket with standard 1/4-20 photographic threads.
3. Gold plated dew shield cover.
4. 2" to 1.25" adapter.
5. 2" extension tube (for Megrez 80 II Triplet ED APO only, to allow for focus when used for visual observing).
6. Additional accessories may be provided if included in a purchased package at the time of sale.

Optional Equipment

In order to operate your Megrez 80 you will need the following minimum equipment:

A sturdy tripod for astronomical or birding usage or a mount (equatorial or ALT-AZ).
A mirror diagonal or erecting prism (The WO 2" Dielectric Diagonal is strongly recommended for better results in star observation and digital photography. A top-quality Dielectric Quartz model is also available now).
At least one or two good eyepieces (9 to 40 mm wide-field recommended) depending on the application.
For Megrez 80 ED, a 2" extender already provided.

For astrophotography, a photo adapter plus a T-mount connection are necessary. William Optics offers a 0.8x reducer flattener with CCD camera adapter.

Please refer to our Accessories Chart on page 02. Quality nebula filters, light pollution filters, Solar Max H-alpha filters, depending on the application.

Also available from WO:
- WO 2" Star Mirror Diagonals
- WO 2" and 1.25" 45° Erecting prisms
- 2.5x Apochromatic Barlow lens
- Super wide angle SWAN / UWAN Eyepieces, 1.25" or 2" versions
- DCL 52, 28, 4337 series "Digital Camera adapter Lens for Digital Cameras and Digital Video"
- Digiscoping adapter: universal adapter for any type of digital camera
- WO 1.25" VR-1 filter improves seeing on bright objects like the Moon "Violet-Reducer"
- WO 90 mm mounting rings, saddle plate, dovetail plate combo for equatorial mounting
- WO 2" Extension Tube
Recommended Accessories

A P O  B a r l o w

Binoviewer Package

Binoviewer
Enjoy the pleasures of BaK4 quality binviewers with compressions rings in your refractor, SCT or Newtonian with a value package including 2 eyepieces (1.25” WA 66° 20mm) and 1.6x corrector Barlow!

Diagonal Mirrors

2” Quartz Dielectric Diagonal
High-quality dielectric coating (99% reflectivity), precision-polished quartz flat in our much-admired, patented mechanics. Our 2” Diagonals are what you need for your best observing sessions. Only from William Optics.

2” Dielectric Diagonal Mirror
99% reflectivity with 1/10 lambda high-precision mirror surface, with elegant exterior design, with 1.25” adapter.

Digital Camera adapter Lenses

DCL-52
This innovative digital adapter lens is designed for large-lens digital camera and digital video cams users’ needs. It can be connected to any 2” diagonal or erecting prism.

2” APO 2.5x Barlow Lens
3-element apochromatic air-spaced, FMC. Great color correction and contrast.
Erecting Prisms

45° Erecting Prisms
Perfect both for astronomical and terrestrial observations. Revolutionary and sophisticated design, extra-smooth feel.

90° Erecting Prism
High quality prism, coating and finish, for good correct-image views of celestial objects. Perfect in daylight too.

SWAN Eyepieces

1.25" Eyepieces
Super Wide Angle (72°).
9 mm, 15 mm, 20 mm focal lengths.
5 elements in 4 groups, fully multi coated. Parfocal.

2" Eyepieces
Super Wide Angle (72°).
25mm 33mm, 40mm focal lengths, FMC. Generous eye-relief.

Uwan Eyepieces

Ultra Wide Angle (82°)
28mm (2"), 16mm (1.25"), 7mm (1.25"), 4mm (1.25")
Mounting Rings

90 mm Mounting Rings internal diameter
These felt-lined mounting rings are made out of solid aluminum, powder painted. A worthwhile investment if you want the best out of your mount and telescope.

Red Dot Finder

Red Dot Finder with Quick Release Bracket
This very practical r.d.f. comes with a handy, quick-release bracket included in the price. Centering your objects in the sky has never been easier!

6x30 FinderScope
6x30 erecting illuminated finderscope. The red illuminated reticle allows precise alignment.

For 30 mm Bracket

For 30mm Bracket

**Company Policies**

**Privacy Policy:**
William Optics Corporation (WO) neither intends to nor will ever disclose your personal information to third parties without your consent. All company personnel with access to customer information are aware of our policies and are trusted professionals in the field. WO intends to enforce these provisions vigilantly for your peace of mind and protection.

**Damage, Shortage & Incorrect Shipment:**
If your purchase has incurred any damage during shipping, you didn't receive the correct product or parts are missing, contact us or your Authorized WO Dealer within 48h of delivery in order for us to assist you without delay.

Carrier-caused problems must be reported to the carrier as well.

**Manufacturer Warranty:**
William Optics is the manufacturer of the products sold on WOnline and through its Authorized Dealers sales network. This means that each original item is covered by the WO warranty. For a period of two years from the date of original retail purchase, WO will repair or replace a defective product provided it is returned to WO freight prepaid, with proof of purchase. Please contact WO to solve any warranty claim.

If the product has been misused, mishandled or if repairs have been attempted or performed without explicit consent from WO, the warranty will be deemed void. Normal wear-and-tear is not covered by this warranty. If the claim is denied because it is deemed to be a non-manufacturing defect, the customer will be notified of the reasons of denial.

This warranty is the manufacturer's warranty; additional warranties may apply but are beyond William Optics Corp.'s responsibility.

WO reserves the right to verify all warranty claims for defective products. WO furthermore reserves the right to change these terms and conditions and product specifications or to discontinue products without previous notice. This does not affect your warranty rights.

**Repair Policy:**
Beyond the warranty period it is the customer's responsibility to deal directly with WO in order to agree upon any repairs or replacements. Please contact William Optics for further details on your options to obtain service on one of our products.

**Return and Refund Policy:**
We hope that you are happy and delighted with your purchase.

If nonetheless you wish to return an item for a refund, please contact us for a return authorization number (RA#), fill in the return form here below and return together with your product to where instructed.

All returns to be refunded must be in perfect conditions, with original paperwork, packaging and proof of purchase.

Refunds after 14 days from the invoice date are subject to a 15% restocking fee. No refund will be allowed after 30 days from the invoice date.

The customer must prepay all transportation costs.

Original shipping charges, taxes or customs duties are not-refundable.
