

Crafting the Earth's Finest Astronomical Instruments

Instruction Manual

This handy 2" Crayford focuser is suited to fit Synta-made (Skywatcher, Celestron, Orion and more) refractors. It will add functionality and style to your observations, assuring imaging without any image-shift, better star testing, and a touch of William Optics's quality. The ideal upgrade for your refractor!

Comes with:

- 2" Crayford focuser: reliable and precise. Zero image shift, solid as a rock, smooth like feather. 360° rotatable with innovative locking system.
- Brass compression rings both on 2" drawtube nosepiece and 1.25" eyepiece adapter.
- Long drawtube (75 mm) with locking thumbscrew with adjustable tension to accommodate any accessory such as CCD cameras, large eyepieces, binoviewers, etc.
- Completely CNC-machined, anodized, solid aluminum & large aluminum knobs.
- Quick release 50mm finderbracket with 3 Teflon-tipped adjustment screws on both rings, included in the price.

80mm Chinese-made refractor in picture. Follow the same procedure for 5-6" versions.

Replacing your bundle die-cast rock-and-pinion has never been easier: release 3 screws, replace the focuser, and get ready for observing in 3 minutes!
